2010 Experimental Warning Program
NOAA Hazardous Weather Testbed, Norman, OK

PHASE 2:
MRMS and GOES-R/LMA

OPERATIONS PLAN

Gregory J. Stumpf, CIMMS/NWS-MDL
Version 1.0
7 May 2010
1. INTRODUCTION

The National Oceanic and Atmospheric Administration (NOAA) Hazardous Weather Testbed (HWT) Experimental Warning Program (EWP) at the National Weather Center (NWC) in Norman, Oklahoma, is hosting the 2010 EWP Spring Program (EWP2010). We will be conducting the EWP2010 for 9 weeks total. Phase 1 of EWP2010 will run from 12 April through 14 May and comprise the Phased Array Radar and CASA radar experiments. This plan details information about Phase 2 of EWP2010, which will run for two weeks from 17 May through 28 May, and two more weeks from 7 June to 18 June. There are no operations during Memorial Day week (31 May – 4 June).

The HWT is joint project of the National Weather Service (NWS) and the National Severe Storms Laboratory (NSSL). The HWT provides a conceptual framework and a physical space to foster collaboration between research and operations to test and evaluate emerging technologies and science for NWS operations. The HWT was borne from the “Spring Program” which, for the last decade, has been used to test and evaluate new forecast models, techniques, and products to support NWS Storm Prediction Center (SPC) forecast operations. Now, the HWT consists of two primary programs. The original NSSL/SPC “Spring Program” is now known as the Experimental Forecast Program (EFP)\(^1\).

The other activity in the HWT, and the subject of this Operations Plan, is the new Experimental Warning Program (EWP), which is designed to test and evaluate new applications, techniques, and products to support Weather Forecast Office (WFO) severe convective weather warning operations. This is the fourth year for severe convective warning-scale activities in the testbed.

During Phase 2 of EWP2010, there will be two primary projects geared toward WFO applications, 1) an evaluation of experimental multiple-radar/multiple-sensor (MRMS) severe weather algorithm products using the NSSL Warning Decision Support System II (WDSSII), 2) an evaluation of GOES-R convective initiation and lightning mapping products, in concert with an evaluation of the 3D Lightning Mapping Arrays (LMA) in Central Oklahoma, Northern Alabama, east-Central Florida, and the District of Columbia Metro Area. We expect the participants to be active in the GOES-R/LMA experiment when severe weather is affecting those domains. The MRMS experiment is less dependent on local weather since we can access the needed radar and other data sets remotely for nearly anywhere in the U. S.

We are looking for feedback from the NWS operational meteorologists. User comments will be collected during shifts, short surveys will be given at the end of shifts, and discussions will occur during post-mortem de-briefings. Remember, input from NWS operational meteorologists is vital to the improvement of the NWS warning process, which ultimately saves public lives and property. The NWS feedback on this test is most

\(^1\) Note that the EFP Spring Program is not the subject of this Operations Plan. For more information on the EFP Spring Program, please contact Steve Weiss (SPC).
important for future development for the NWS and eventual implementation of new application, display, and product concepts into AWIPS2 and other operational systems.

You are part of a unique team of NOAA scientists, comprised of researchers, technology developers, and operational forecasters, working together to test new and experimental severe weather warning decision making technology for the NWS. In this operations plan you will find basic information about the various new technologies and products that we are testing during the 2010 spring convective season, as well as logistical information about the six-week program for all participants.

Additional information about the EWP Spring Program is available and regularly updated on our Web site:  http://ewp.nssl.noaa.gov.

2. OBJECTIVES

“What do we want from you?”

This question applies to each participant in the EWP Spring Program, including the research and technology specialists, the forecaster participants, the weekly coordinators, and other observers. This manual will attempt to answer that question in a broad sense. For the individual experiments, their respective manuals will provide more detailed objectives.

The National Severe Storms Laboratory (NSSL) has played a key role in the development and evaluation of applications and technology to improve NWS severe convective weather warning operations. The development process at NSSL begins with basic and applied research including field experiments, theoretical studies, and case studies designed to better understand storms and relate weather to remotely sensed signatures. This research leads to the development of technological applications, including computer algorithms employing sophisticated image processing and artificial intelligence, and innovative display systems [e.g., the Four-dimensional Stormcell Investigator (FSI)], and NSSL leads the path in new Doppler radar technologies. Evaluations are conducted using archived case studies as well as real-time proof-of-concept tests at the Hazardous Weather Testbed during actual severe weather warning operations. Feedback from the evaluations leads to further research and refinement of applications, and ultimate operational applications for users. The new concepts continue to be tested to determine whether they will be included in future operational systems that help guide and manage the severe weather warning decision-making process.

The primary objectives of the 2010 EWP Spring Program are as follows:

• To evaluate the accuracy and the operational utility of new science, technology, and products in a testbed setting to gain feedback for improvements prior to their potential implementation into NWS severe convective weather warning operations.
• The Hazardous Weather Testbed serves as a primary vehicle for transitioning new research, knowledge, and concepts into NWS operations. It is designed to provide forecasters with direct access to the latest developments in meteorological research while imparting scientists with the knowledge to formulate research strategies that will have practical benefits for operations.

• To foster collaboration between NSSL scientists and operational meteorologists.

• The WFOs are our primary customers. We want to work with you to understand your requirements and improve warning accuracy and services. This will also allow for continued scientific collaboration on application development, and on informal and formal publications. The interaction between scientists and operational meteorologists will provide a synergy that will lead to improvements in future products.

The overall objectives of the specific projects to be conducted during the 2010 EWP Spring Program are:

• To evaluate the operational utility of multiple-radar/multiple-sensor severe weather algorithms in supporting NWS hazardous convective weather warning decision making. We would like our participants to:

  o Provide feedback on the ability of these applications to enhance traditional base-radar data analysis in warning decision making.

  o Suggest improvements or new multiple-radar/sensor products that will aid warning decision making.

• To evaluate operational utility of experimental applications intended for the GOES-R satellite platform, including total lightning data, during real-time operational warning situations as well as through playback of archived cases.

  o Assess various satellite-based applications, including convective initiation applications for the pre-storm environment, and an overshooting-top algorithm.

  o Evaluate GOES-R pseudo-GLM products including mean, median, and maximum flash footprint and flash rate of storms for use in storm interrogation and warning decision making.

• Forecasters may have an opportunity to evaluate various radar data assimilation algorithms that may be used within future Warn-On-Forecast systems.

More detailed information about the individual experiments, including specific objectives, evaluation details, and technology user manuals, are available in separate documents, available online and in EWP loose-leaf binders given to the participants at the start of their visit.
3. SCHEDULES

a. Dates of operation

Phase 2 of EWP2010 will be conducted during a **four-week period** beginning **Monday 17 May 2010**, and ending **Friday 18 June 2010**. There will be no operations Memorial Day week this year (31 May – 4 June 2010). During these four weeks, 4-5 full-time NWS participants will be visiting each week. There will also be a few additional part-time observers any of the weeks.

b. Weekly schedule

The weekly schedule will be as follows:

- **Mon-Thu 1pm-9pm** Daily operations, including Intensive Operations Periods (IOP)
- **Fri 10am-1pm** Debriefing and optional seminars

d. Operations Day Schedule (Mon)

- **1245pm** Visitor welcome at NWC 1st floor entrance and short tour of HWT facilities
- **100-130pm** New participant Orientation
  
  To be given to the new weekly participants by the 2010 EWP Operations Coordinator (Greg Stumpf) in the NSSL Development Lab (NWC 2820).
- **130-200pm** EWP daily meeting in NSSL Development Lab, led by the weekly coordinator
  
  Daily operations coordination discussion based on SPC DY1 Outlook (**more information** later in this manual)
- **200-215pm** Break
- **215-530pm** Project Introduction Seminars (usually in the Dev Lab)
  
  We will introduce the projects through a series of short seminars and demos. If an IOP is required early, then we will only do the seminars which will be the focus of the Monday IOP, and save the remaining seminars for Tuesday.
530-630pm Dinner Break (weather permitting)

630-900pm Intensive Operations Period (IOP) or Training/Archive Playback (HWT Ops Area)

Detailed in a later section.

e. Operations Day Schedule (Tue-Thu)

100-200pm EWP daily meeting in NSSL Development Lab, led by the weekly coordinator

Debriefing of the previous day’s events

Daily operations coordination discussion based on SPC DY1 Outlook (more information later in this manual)

200-900pm Intensive Operations Period (IOP) or Training/Archive Playback (HWT Ops Area)

Detailed in a later section.

f. Debrief Day Schedule (Fri)

1000am-1200pm Weekly debrief (Dev Lab)
1200pm-100pm Optional brown bag lunch seminars (Dev Lab)
100pm Operations End for the week

g. Participant Orientation and Training

Monday 100-130pm will be new participant orientation in the dev lab introducing the participants to the project, and the experiment evaluation elements and objectives.

Then, during each of the four operations days (M-Th) there will be opportunities for the participants to learn about the experiments (individual training seminars and demos). The weekly coordinator will determine which time periods and on which experiments each participant will be training.

h. Typical Mon-Thu 1-9 pm Operations Activities:

During the 100-200pm EWP daily meeting, the weekly coordinator will choose which domain, time period, and projects we’ll be concentrating on for the current operational
day, and which participants will be assigned to which experiment stations for that day. This daily schedule will be based on the location and timing of the chosen DY1 weather threat used for operations although departures from the official SPC forecast may be needed in some cases.

During the 2-9pm period, we will choose a 3 hour intensive operations period (IOP), centered on the event of interest. This will be padded by 30 minutes on either side for 30-minute situational awareness briefing given by the weekly coordinator, and a 30-minute post-IOP discussion, for a total of 4 hours. Normally, we will not work a longer intensive ops shift than this, but there may be one or two events, especially intense events, in which we might want to run longer than 3-4 hours. During IOPs, the project scientists will capture images, and to write and update live blogs detailing their notes, images, and participant feedback. The remaining 3 hours of the 8 hour shift that can be used for orientation, training, and running archive cases for any of the experiments. Some of the participants may be divided to separate stations.

On same days, the participants designated to work with GOES-R/LMA data for that day may join their EFP counterparts working with the SPC from 2-4pm in an overlapping shift instead of working an archive case event.

An example set of daily schedules might look like this:

**Monday:**

1245-100 Meet in lobby; short HWT tour
100-130 New participant orientation seminar
130-200 Daily Meeting (map discussion for Monday)
245-530 Project training and Demos
530-630 Dinner Break (weather permitting)
630-900 **IOP** (Iowa MODT Risk area): All participants: MRMS.

**Tuesday:**

1-2 Daily Meeting (Monday debriefing, map discussion for Tuesday)
2-4 **Overlapping shift with EFP:** Participants 1 and 2 – GOES-R/LMA; **Archive Case Analysis:** Participants 3 and 4 – MRMS.
5-9 **IOP** (Northern AL): Participants 1 and 2 – GOES-R/LMA; Participants 3 and 4 - MRMS.

**Wednesday:**

1-2 Daily Meeting (Tuesday debriefing, map discussion for Wednesday)
2-4 **Archive Case Analysis:** All Participants: - GOES-R/LMA.
5-9 **IOP** (Central OK): Participant 1 and 4 - MRMS; Participants 2 and 3 – GOES-R/LMA.
Thursday:

1-2  Daily Meeting (Wednesday debriefing, map discussion for Thursday)
2-6  **IOP** (Eastern OR): All participants - WDSSII.
7-9  Archive Case Analysis: Participants 1 and 2 – MRMS; Participants 3 and 4 – GOES-R/LMA.

Friday:

10-12 End-of-week debriefing
12-1  Brown bag lunch in dev lab: Optional seminars or depart.
1pm  Forecasters depart to return home

i. *Debriefings*

The daily debrief will include a playback of the previous day’s events and a short discussion of each of the experiments. The weekly debrief will be a time for longer and continued discussions and end-of-week wrap-up. Feedback obtained during these briefings will be collected and recorded by the weekly coordinator.

4. PERSONNEL

a. *EWP Officers*

**Greg Stumpf**  
Operations Coordinator  
greg.stumpf@noaa.gov  
405-826-8644

**Kevin Manross**  
Information Technology Coordinator  
kevin.manross@noaa.gov  
405-255-0537

**Travis Smith**  
Operations Team Leader  
travis.smith@noaa.gov  
405-834-9687

**David Andra**  
Operations Team Leader  
david.andra@noaa.gov  
405-325-3527

b. *Weekly Coordinators*

There will be one primary weekly coordinator and a backup coordinator each operations week. The backup coordinators will fill in if the primary cannot be present for any reason.
The weekly coordinators will be responsible for facilitating daily briefings from 100-200pm. These briefings will include a debriefing of the previous day's activities, as well as a short discussion, using the SPC DY1 outlook as guidance, as to the schedule for the day's events. The weekly coordinator will also facilitate a Friday end-of-week debriefing from 10am-12pm, and arrange a brown-bag seminar session if any participants desire to give a talk (from 12-1pm, "conference style" if there are more than one seminars). The weekly coordinator is also expected to provide a situational awareness “shift change” briefing for the first 15-30 minutes of each Intensive Operations Period (IOP). The weekly coordinator is also present during each IOP. Finally, the weekly coordinator is responsible for "blogging" a short daily summary to be posted to the EWP web site prior to the next day's briefing, as well as a slightly longer weekly summary by the following Monday.

The responsibilities of a weekly coordinator include:

- Meeting the visiting participants upon their first arrival at the NWS on Monday.
- Providing a short tour of HWT facilities on Monday to the visiting participations.
- Facilitating the EWP daily coordination meeting.
- Distribution of participants within daily operations (who works where and when?)
- Facilitating the daily and weekly post-mortem debriefings.
- Participation during and coordination of the Intensive Operations Periods (IOP).
  - Live blogging during IOPs and/or ensuring that the cognizant scientists are live blogging during IOPs.
  - Ensuring the smooth running of the technology and alerting various IT folks when there are problems.
  - Collecting forecaster feedback, quotes, and testimonials from the cognizant scientists and forecaster/evaluators.
  - Rotating forecasters amongst workstation locations at 1 or 2 hour intervals.
  - Coordinating the content on the Situational Awareness Display (SAD).
  - Ensuring “crowd and noise control”.
  - Facilitating news media (these should not be disruptive)
  - Facilitating post-IOP 30-minute discussions.
- A daily outlook (1-3 paragraphs with images) at the start of a shift for the EWP blog.
- A daily summary (1-3 paragraphs with images) at the end of a shift for the EWP blog.
- A weekly summary (1-2 pages), ready by COB next Mon, for the EWP blog.
- Setting up visitor Friday brown bag seminars.

c. **Cognizant Scientist Participants (NWC researchers, and more!)**

These are participants with advanced knowledge of the specific project and technologies (GOES-R/LMA, MRMS), and who will work closely with the forecaster/evaluator
participants during training, operations, and debriefings. These are typically NWC scientists or collaborating academic institutions and/or laboratories. There will be at least 1 Cognizant Scientist per experiment available on any given day. Information about accessing the internal Web page will be provided to all participants prior to the start of the project. The cognizant scientists will also be available 10am-12pm Friday for the end-of-week debriefing.

d. Forecaster/Evaluator Participants (WFO meteorologists, and more!)

The bulk of these participants will be the invited NWS WFO forecasters. The forecaster/evaluators will be available full-time for the entire weekly shift schedule. There will be 4 to 5 Forecaster/Evaluator participants assigned on any given day, and a schedule will be posted online.

Regardless of their affiliation, these are the participants who will fill the role of a NWS WFO forecaster, helping to evaluate each experiment and providing feedback in real-time and during postmortem debriefings as per the experiment objectives. They will be working alongside Cognizant Scientists at any of the experiment stations during the week.

e. Observers

In addition to the full-time forecaster/evaluators, there may be several part-time observers for each operations day. The observers represent a number of different institutions inside and external to the NWC.

5. TRAVEL LOGISTICS

a. Location

The 2010 EWP Spring Program will take place at the National Weather Center (NWC) in Norman, Oklahoma. Evaluations of the primary experiments will be conducted in the area known as the Hazardous Weather Testbed (HWT) operations area. The HWT is physically located in a glass-enclosed room between the operations floors of the Storm Prediction Center (SPC) and the Norman NWS Weather Forecast Office (OUN WFO) on the NWC 2nd floor. The daily and weekly briefings (1pm Mon Thu; 10am Fri) will take place in the NSSL Development Lab, which is Room 2820 adjacent to the NWC Atrium elevators on the 2nd floor.
b. **NWC Building Security**

The NWC is a University of Oklahoma building that houses several NOAA facilities. Therefore, certain NOAA security requirements are in effect for visitors to the building. All NOAA employees are required to visibly wear, at all times, their NOAA identification badges, in addition to special “HWT Spring Experiment” badges they will receive upon Monday check-in. Non-NOAA visitors must check in **each day** with the security desk at the 1st floor entrance to obtain a daily visitor pass.

Most participants will be issued one white magnetic key card which will allow entrance into certain secure locations in the NWC. These include the NOAA main hallway (with access to a kitchenette) and the HWT operations area. Participants must return their door key cards and visitor badges to the Operations Coordinator before they leave the NWC on Friday to return home, as these will be reused each week for the next set of participants.

Participants who are foreign nationals cannot be issued an NWC building access key card. Since participants will be working shifts with other participants who have NOAA IDs, if there is any need for the foreign participants to re-enter the building during off-business hours, a daily or weekly participant with a NOAA ID can provide access.

c. **Lodging, Amenities, Maps**

Out of town participants are encouraged to stay at one of the following hotels depicted on Figure 1 which offer the U. S. government per diem lodging rates. The hotel locations (except the Best Western and Residence Inn) are nearby a number of restaurants and other Norman businesses. This will allow participants to share rides if needed, or to socialize outside of shift hours.

![Fig 1. Map of the Norman area, incl. location of hotels and the National Weather Center.](image-url)
Figure 2 shows a map with directions from Will Rogers World Airport to the National Weather Center. Be aware that the section of Interstate 44 that you will travel from the airport is in the direction of “West”, even though it goes south on the map. Take Airport Road to I-44 West to I-240 east to I-35 South to Norman. You can find specific information about the hotels in Appendix A.

Additional visitor information is available at this link:

http://www.nssl.noaa.gov/aboutnssl/visitor.html

Each participant’s travel is fully funded and has generously been provided by NSSL and the GOES-R Program. Details on travel charging are distributed to the participants via email prior to the start of their trip.

Participants are encouraged to save costs by sharing rides (e.g., one rental car split between all weekly visitors) to and from the NWC. NWC employees will be unable to provide personal shuttle service.

d. Information specific to invited WFO participants

Note that the NSSL-sponsored full-time WFO participants are required to participate on the following schedule:

Mon-Thu 1pm-9pm  Daily operations
Fri 10am-1pm  Debriefing and optional seminars
The dates and times for travel to and from Norman will have to be determined and approved by the participants’ WFO management to guarantee that the participants are on site for the above shifts.

On rare occasions, we may exceed the number of working hours (past 9pm) to capture a late event. In these cases, we will ask each participant who is a member of the NWS Collective Bargaining Unit to seek approval for additional overtime hours from their WFO management. Only those participants granted overtime will be allowed to work past 9 pm. Non CBU participants (SOOs, etc.) do not need overtime approval.

Also note that these shifts will intersect dinner time (M-Th) and lunch time (F). WFO participants are required to eat their meals during a short shift break, one forecaster at a time; preferably as to minimize impact to EWP operations (this can be coordinated on a daily basis). A kitchenette with a microwave, sink, and full-size refrigerator is available in the NOAA common space. On occasion, we may order dinner in (e.g., pizza), but usually not during a major real-time operational event. Note that the Flying Cow Café in the NWC closes at 3pm every day and does not serve dinner.

e. Optional seminars

In the past, some of the HWT visitors have requested time to present a seminar on a topic of their choosing. While seminars are not required for participation in the Spring Experiment, we will accommodate participants if there is interest. We have set an optional block of time on Fridays, from 12-1pm, for seminar presentations. These seminars will be conducted in the NSSL Development Lab. Since this is lunch time, the seminars will be of a “brown bag lunch” informal style with a generally small group of attendees. If more than one participant chooses to present a seminar, they will be squeezed into the one hour block, using “conference style” timing (15, 20, or 30 min each), for a maximum of 4 seminars. Seminars should be arranged with the weekly coordinator prior to Friday so that an announcement can be sent to interested viewers.

f. Participant schedule and contact information

The staffing schedule will be posted on the EWP Internal Web Page (https://secure.nssl.noaa.gov/projects/ewp). All participants should provide their email and cell phone information to the Operations Coordinator prior to their visit.

6. EQUIPMENT

There will be a variety of equipment available in the HWT Operations Room to support the EWP Spring Program (Fig. 3).
The **Situation Awareness Display (SAD)** will consist of 7 large LCD monitors that will provide images from any of the other EWP computer monitors, as well as live television, web page content, etc. These LCD monitors will be mounted above the desks in two areas of the HWT.

There are three HWT workstation pairs, as well as several support stations. We have the capability to run any experiment from any of the workstations.

- **w2hwt1 - w2hwt2** occupies the SW corner of the HWT.
- **tupelo - higgins** occupies the south-central wall of the HWT.
- **moore - plainfield** occupies the curved table near the west column in the HWT.

There are two **Advanced Weather Interactive Processing System (AWIPS) servers** along the south wall flanking either side of the tupelo – higgins workstation pair. These AWIPS servers (px1-hwt, lx1-hwt) have the capability of running several live Open Radar Product Generator (ORPG) for any live radar feed in the CONUS, such that we can localize the AWIPS system to any NWS WFO. Besides live WSR-88D data, the AWIPS system will provide live satellite, surface, upper air, and numerical model data.

In addition to the dedicated AWIPS PCs, each of the WDSSII Linux workstations will also be capable of running **AWIPS Operational Build 9.2 software**. The MRMS, GOES-R, and LMA grids are provided for viewing within the AWIPS Display 2-
Dimensions (D-2D) Volume Browser. The forecasters will be using the experimental data along with traditional weather data to issue experiment products and warnings on AWIPS.

If any forecaster has WDSSII experience, they are also free to view the data using that platform. In addition, all of the WDSSII product grids will be made available in Google Earth™ (GE). GE now has the capability to display multi-parameter trends as well as animate data. These experimental products will be available to participants, and any NWS forecaster, on the outside. We will encourage the use of the products in support of WFO warning operations this spring. The following URL contains GE KML links to the WDSSII product suite: http://wdssii.nssl.noaa.gov

7. ACKNOWLEDGMENTS

The 2010 EWP Spring Program wouldn’t be possible without contributions from a number of individuals and organizations. Those from the National Oceanic and Atmospheric Administration (NOAA) include: the National Severe Storms Laboratory (NSSL) Radar Research and Development Division and the NSSL Warning Research and Development Division, the National Weather Service’s Meteorological Development Laboratory (MDL), and the NWS Weather Forecast Office in Norman, OK.

In particular the following individuals should be cited: Kevin Manross, Darrel Kingfield, Ben Baranowski, Karen Cooper, Travis Smith, Kristin Kuhlman, Chris Siewert, Kiel Ortega, Don Burgess, Charles Kerr, Robert Toomey, Jeff Brogden, Valliappa Lakshman, Kurt Hondl, Vicki Farmer, Paul Griffin, Brian Schmidt, Will Agent, Brad Sagowitz, Bob Staples, Patrick Burke, David Andra, and others.

This work has been primarily funded via sources from the National Severe Storms Laboratory, the National Weather Service Meteorological Development Laboratory, and via NOAA-OU Cooperative Agreement #NA17RJ1227.
APPENDIX A: Lodging Options for the Norman Area

All of these options are within 5 miles of the National Weather Center and offer the Norman Federal per diem rate of $70/night for certain rooms.

---

**County Inns & Suites (PRIMARY HOTEL):**
960 Ed Noble Parkway
Norman, OK 73072
405-360-0240

Federal government rate of $70 is available with a government ID. This hotel opened in 2007. It is located approximately 3 miles from the NWC. Hotel is within walking distance of restaurants and shopping. The hotel is 100% smoke-free. Amenities include: deluxe continental breakfast; heated indoor pool and spa, fitness center, free in-room wireless high speed internet.

---

**Fairfield Inn:**
301 Norman Center Court
Norman, OK 73072
405-447-1661

Federal government rate of $70 is available with a government ID. Newly remodeled in 2009 with new bedding. It is located approximately 4 miles from the NWC. Hotel is within walking distance of several restaurants, shopping, and the Sooner Fashion Mall. The hotel is 100% smoke-free. Amenities include: complimentary continental breakfast, indoor pool and spa, exercise room, free in-room wireless high speed internet, microwave, 24-hour snack shop.

---

**La Quinta Inn:**
930 Ed Noble Drive
Norman, OK 73072
405-579-4000

Federal government rate of $70 is available with a government ID. Newly renovated. It is located approximately 3 1/2 miles from the NWC. Hotel is within walking distance of restaurants and shopping. The hotel is 100% smoke-free. Amenities include: complimentary continental breakfast, outdoor pool and spa, fitness center, free in-room wireless high speed internet, microwave and refrigerator in some rooms.
Hilton Garden Inn:

700 Copperfield Drive
Norman, OK 73072
405-579-0100

Federal government rate of $70 is available with a government ID. This hotel opened in 2008. It is located approximately 5 miles from the NWC. Hotel is within walking distance of several restaurants. Amenities include: on-site dining, LCD TV, outdoor pool, exercise room, free in-room high speed internet, microwave, and mini-fridge, 24-hour snack shop.

Marriott Courtyard:

770 Copperfield Drive
Norman, OK 73072
405-701-8900

Federal government rate of $70 is available with a government ID. This hotel opened in 2008. It is located approximately 5 miles from the NWC. Hotel is within walking distance of several restaurants. The hotel is 100% smoke-free. Amenities include: on-site dining, indoor pool and spa, exercise room, free in-room wired and wireless high speed internet.
